

Battery Powered Portable Device Design Based on i.MX 8ULP

BP-IMX8PULP-POC

Last Updated: Apr 24, 2024

NXP's iMX 8ULP-based portable device reference design can optionally be powered by a lithium battery. This enables developers to quickly and easily implement many designs, including smart watches, on this reference design platform. This reference design provides developers with a low-power, small form factor design example that enables fast out-of-the-box operation, minimizing time to market, risk and development effort.
