# QorIQ® T1024 Development Board

T1024RDB

Last Updated: Dec 18, 2023

The QorIQ® T1024 reference design board (T1024RDB) is a high-performance evaluation and development platform supporting the QorIQ T1024 and T1014 communications processors built on Power Architecture® technology.

Intended for evaluation of the QorIQ T1 family of communications processors in networking and Ethernet-centric applications, such as mixed control and data plane in fixed routers, switches, Internet access devices, firewall and other packet-filtering applications, plus general-purpose embedded computing.

The QorIQ T1024RDB can help shorten time to market and serves as a reference for hardware and software development, debugging and performance evaluation prior to production.
