# Thermostat Module Board

THERMOBOARD

Last Updated: Apr 23, 2024

NXP's Thermostat Board Module, designed for industry applications, is part of the robust product portfolio that provides MCU, sensor, wireless connectivity, interface solutions and anti-tamper products for your heat metering applications. This solution is based on a LPC1549 microcontroller series optimized for fast, easy and high-precision motor control and high accuracy with sensor and sensorless motor control.
